Building Supply Controller Ver 7.1 Bulletin 0004
November 5, 2003
Label Printing
Contributed by Mainframe Associates
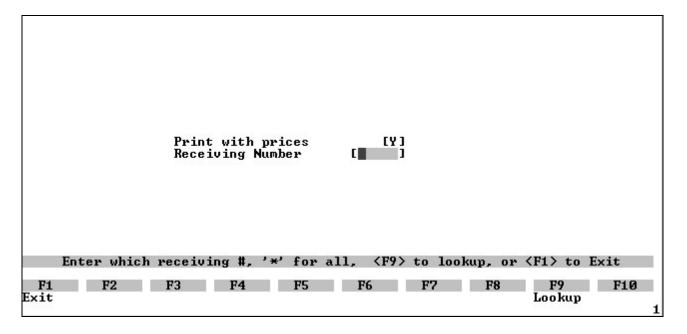

Menu Plate: BECIJ

In previous versions, users wishing to print labels for each receiving order separately had to receive each order one at a time, print the labels, and then clear the label file. Version 7.1 now allows the user to process the printing of labels by receiving order.

(For those sites not using target margins and bin labels to stay on top of cost increases, watch for an upcoming bulletin on margin management.)
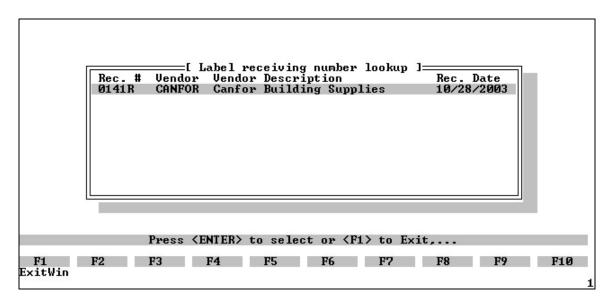

Version 7.1 now allows you to process multiple receiving orders before printing labels. Label printing programs have been modified to prompt the user to input a receiving number. This method allows the user to print labels based on a single receiving order if they wish.

The new receiving bin label prompt looks like this:

```
                   Print with prices          [Y]
                   Receiving Number          [▮     ]

        Enter which receiving #, '*' for all,  <F9> to lookup, or <F1> to Exit
   F1       F2       F3       F4       F5       F6       F7       F8       F9      F10
Exit                                                                    Lookup
                                                                                    1
```
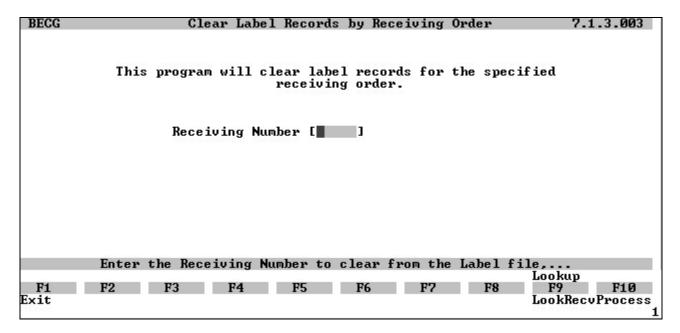

Bulletin 0003 – Label Printing continued

The F9 key will display the receiving orders that have not yet had labels printed.

```
                        ═[ Label receiving number lookup ]═
             Rec. #   Vendor   Vendor Description           Rec. Date
             0141R    CANFOR   Canfor Building Supplies      10/28/2003

                    Press <ENTER> to select or <F1> to Exit,...
  F1      F2      F3      F4      F5      F6      F7      F8      F9      F10
ExitWin
                                                                          1
```

The process to clear the label file will now prompt the user for the receiving number to clear.

```
 BECG                 Clear Label Records by Receiving Order          7.1.3.003

            This program will clear label records for the specified
                            receiving order.

                   Receiving Number [        ]

               Enter the Receiving Number to clear from the Label file,...
                                                                Lookup
  F1      F2      F3      F4      F5      F6      F7      F8      F9      F10
Exit                                                          LookRecvProcess
                                                                          1
```

Bulletin 0003 – Label Printing continued

Should the user wish to print labels from inventory using the 'Preload By Item' option, pressing <CR> will assign a dummy receiving number and then allow you to enter items. This dummy receiving number will allow the user to group or batch items. These labels can then be printed using the 'By Receiving' print option using the dummy receiving number.

```
