Bulletin 0006 – Reporting Options

With either style, after choosing the Printer Selection option you will be prompted to select from a list of available printers.

The screenshot shows a terminal window titled "Sales Audit Report" with a date "7.1.19.029" in the top right. The main menu has options: "Printed r", "Begin", "Ending Period", "Item Number", "Customer Number", and "(P)rofit / (L)". A sub-menu titled "Output Selection" is open, listing "PRT1 - Spool Okidata Dot-Matrix Printer" and "PRT2 - Local Printer". To the right of this menu, the text "and Total" and "pruce 2x4x8" are visible. Below the menu, it says "RECORDS PROCESSED: 10". At the bottom, there is a "Processing...." status bar and a row of function keys from F1 to F10. F1 is labeled "Backup".

If you are connected via a PC running the Windows® operating system using TWS, you may choose the Workstation option. Report output will then open in the default application for documents with a .txt extension (often Notepad or Wordpad, depending upon your Windows® configuration).

If you run a Reporter™ report, you will first be prompted to select between Word Processor format (.txt) or Spreadsheet format (.csv).

The screenshot shows a terminal window titled "THE CONTROLLER SERIES SOFTWARE by Mainframe Associates (250) 729-0969". The main menu includes "HOME", "GENERAL Home Menu", and "GENERAL 1.5.34". A sub-menu titled "Selection Options" is open, listing "Output Selection", "Screen Display", "Print", "Usage Selection", "Word Processor", "Spreadsheet", "Help with option", and "Exit (or Esc)". To the left of this menu, the text "Press <CR>" and "Include de" are visible. Below the menu, it says "Please select an option". At the bottom, it says "Version 7.1 licensed to MAINFRAME ASSOCIATES INHOUSE for 24 users".

Selecting the Windows output option will not work on a serial terminal or on the main server.

Bulletin 0006 – Reporting Options

Some reports have an Email option available.

```

BJCCD      Understock Report by Supplier, Department, Item      7.1.13.006

The email option requires that you have the optional Theo+Mail component installed and configured. **If Theo+Mail is not part of your configuration, the system will not send an email and will not produce an error message.**

Reporter™ reports that have output options also have a Data File Preparation option. You can prepare space-delimited, comma-delimited, or Theos ISAM files for use by other applications. Files can be generated for Theos or Windows and saved on the server or on a connected computer.
